

Woody shrub to 2.6 m tall

Salicaceae (Willow Family)

Phenology: flowers May to June; plants reproduce vegetatively, making it difficult to determine if sexual reproduction is occurring.

Management Responsibility: USFS (Apache-Sitgreaves NF), White Mountain Apache Tribe.

Notes: population trends have been improving as a result of more conservation-oriented management practices; a conservation strategy, assessment and agreement is being implemented. Under stressed habitat conditions often has a rust disease outbreak in clonal population.
