

Asteraceae (Sunflower Family)

Phenology: flowers and sets fruit in September and October.

Management Responsibility: USFS (Coronado NF).

Synonym: *Senecio multidentatus* Schultz-Bip. ex Hemsl. var. *huachucanus* (Gray) T.M. Barkley.

Notes: populations in the Santa Ritas and Huachucas monitored regularly since 1991. Population trend is stable, with both populations exhibiting high reproduction and recruitment. New population discovered in the Chiricahuas (1997).
